PROFESSIONAL SUMMARY

Data Scientist with 2+ years of experience spanning agentic AI systems, statistical modelling, and applied machine learning across research, sports analytics, and financial domains. Built and deployed StockFlow, a production-grade multi-agent AI platform using LangGraph, FastAPI, and GCP Cloud Run, integrating LLM-powered agents with real-time data pipelines. Proven track record translating complex analytical findings, from geospatial behavioural analysis to time-series forecasting, into actionable insights for both technical and non-technical stakeholders. Proficient in Python, SQL, and cloud-native deployment on AWS, GCP. MSc Data Science with Distinction.

TECHNICAL SKILLS

Languages & ML: Python, SQL, Machine Learning, Statistical Modelling, XGBoost / LightGBM, scikit-learn, PyTorch / TensorFlow

AI & Analysis: Agentic AI (LangGraph), Large Language Models, Prompt Engineering, Feature Engineering, EDA, NLP (spaCy), Pandas / NumPy, Data Visualisation

Cloud & Tooling: AWS (EC2, S3), GCP (Cloud Run, Firebase), Docker, FastAPI, CI/CD (GitHub Actions), Git, ChromaDB

WORK EXPERIENCE

University of Essex | Wivenhoe, UK

Data Scientist II (Research and Analytics)

Oct 2025 – Feb 2026

- Engineered a geospatial analytics pipeline processing telemetry from 128 sensors, applying Kernel Density Estimation and statistical hypothesis testing to uncover significant grazing pattern shifts, leading farmers to redesign rotational grazing strategies.
- Designed geospatial visualisations translating complex spatial statistics for non-technical stakeholders, enabling data-driven land management decisions.

Data Scientist (ML and Analytics)

Feb 2025 – Apr 2025

- Built automated Python data pipelines integrating two large public rugby-participation datasets, feeding Power BI dashboards used in strategic planning discussions.
- Identified 6% year-on-year female participation growth and surfaced high-potential UK Midlands counties for targeted Rugby Football Union investment.

Data Scientist (ML Modelling)

Oct 2024 – Jan 2025

- Performed large-scale data wrangling on 38GB of digital twin sensor data, building a clean pipeline for predictive modelling and anomaly detection.
- Evaluated forecasting approaches (XGBoost, LSTM, Prophet), achieving over 75% accuracy and establishing forecasting feasibility for the digital twin system.

Graduate Laboratory Assistant

Oct 2023 – Mar 2024

- Mentored a cohort of 40+ undergraduates in end-to-end data science workflows, guiding them from data preparation and modelling through to production-style deployment concepts in hands-on lab sessions.

AI Variant | Data Science Intern

Data Science Intern

Sept 2022 – June 2023

- Performed feature engineering and data wrangling across automotive, telecom, and NLP domains, adapting modelling approaches to each domain's data characteristics.
- Led and mentored a 6-member data science team building production-ready machine learning models, overseeing the path from experimentation to deployment.

PROJECTS

StockFlow: Research | Analyse | Decide — [Live deployment on GCP and Firebase](#)

- Architected and deployed an AI-native stock intelligence platform on GCP Cloud Run, integrating a LangChain pandas agent for natural language financial queries, a dual-persona AI podcast engine (Claude + ElevenLabs), and ChromaDB-powered semantic news retrieval across 48 tickers spanning 8 sectors.
- Implemented automated CI/CD via GitHub Actions and a Cloud Scheduler-driven daily data refresh pipeline, ensuring continuous, production-grade reliability with zero manual intervention.

Ingredient Analysis with NLP — *Azure AI Foundry, Custom NER, CLU*

- Built a domain-specific Custom NER model in Azure AI Foundry Language Studio to identify and classify food ingredients from raw text, paired with a rule-based engine grading products across a five-tier A–E health scale.
- Extended the system with a TF-IDF batch classifier and a Conversational Language Understanding (CLU) question-answering layer, orchestrated into an end-to-end pipeline from raw ingredients to plain-language health answers.

CERTIFICATIONS AND RECOGNITION

- Google Data Analytics Certification — Data Analysis using R.
- Volunteered for 9 months at an Indian NGO, teaching English and Mathematics to underprivileged children.

EDUCATION

MSc Data Science, with Distinction

University of Essex | Oct 2023 – Oct 2024

BEng Mechanical Engineering

University of Mumbai | Aug 2018 – May 2022
